WIRE-TRUTH VERIFICATION & DIAGNOSTIC AUDIT • EU DORA RTS 2024/1772 & ISO/IEC

42001

Project: 48-Hour Staging Diagnostic Audit	Fixed Fee: €1,500 (Excl. VAT) / ~38,000 CZK
Client Org: [Client Organization / Bank Target]	Execution Boundary: 100% Local / Air-Gapped (127.0.0.1)
Date: September 22, 2026	Standards: EU DORA Art. 17, ISO 42001 Cl. 9, CAICT ATH 1.0

1. PURPOSE & AUDIT OBJECTIVE

To evaluate the evidence-integrity of Client autonomous agent harnesses under simulated transport failure modes (specifically HTTP 504 Gateway Timeouts, TCP resets, and tool-call schema drift). The audit is executed entirely locally on Client infrastructure with zero cloud egress, verifying whether agent harnesses preserve an immutable UNKNOWN state during failure or falsely commit ungrounded CONFIRMED claims.

2. SCOPE OF WORK & INVARIANTS

- Ingestion:** Process up to 250 anonymized staging execution traces provided by Client.
- Fault Injection:** Simulate out-of-band network transport drops (HTTP 504, TCP RST) against mutating dispatches.
- Privacy Guard:** Apply in-memory regex scrubbing for IBANs, PANs, and JWTs before any diagnostic data touches disk.
- Precedence Cascade:** Enforce mathematical lattice: Evidence Absent on Wire => State Forced to UNKNOWN.

3. DELIVERABLE BUNDLE (5 PRODUCTION ARTIFACTS)

Artifact File	Format	Description & Business Value
TRI_Scorecard.md	Markdown	Toxic Receipt Index (%) scorecard evaluating unsupported completion claims across traces.
dora_art17_gap_report.json	JSON	EBA DORA RTS 2024/1772 Article 17 major incident reporting register filing.
audit_trace.mermaid	Diagram	Visual sequence diagram mapping physical wire drop vs. agent SDK false confirmation.
ProofOrStopFilter.java	Java Source	Drop-in Spring Boot WebClient / LangChain4j fail-closed filter (15-line patch).
RT.01.03_vendor_entry.csv	CSV	Pre-filled European Supervisory Authorities (ESA) register submission for ICT third-party risk.

4. SECURITY & DATA PROTECTION GUARANTEES

- Zero Cloud Egress:** Runs 100% locally on Client loopback (127.0.0.1) or air-gapped Docker (network_mode: none).
- In-Memory Sanitization:** All banking PII (IBANs, card numbers, bearer tokens) redacted in-memory prior to trace evaluation.
- Non-Intrusive Access:** Evaluates staging traces only; requires zero production database access or API write credentials.

5. AUTHORIZATION & SIGN-OFF

FOR CLIENT: [Client Company Name]	FOR PROVIDER: SovereignNexus s.r.o.
Signature: _____	Signature: <i>Andrii Leukhin</i>
Name: _____	Name: Andrii Leukhin
Title: _____	Title: Founder & Lead Architect
Date: ____ / ____ / 2026	Date: 22 / 09 / 2026
